the-napkins.com

Why tree free ?

Bamboo is considered a grass, which grows quickly and easily without need for any pesticides or fertilizer.

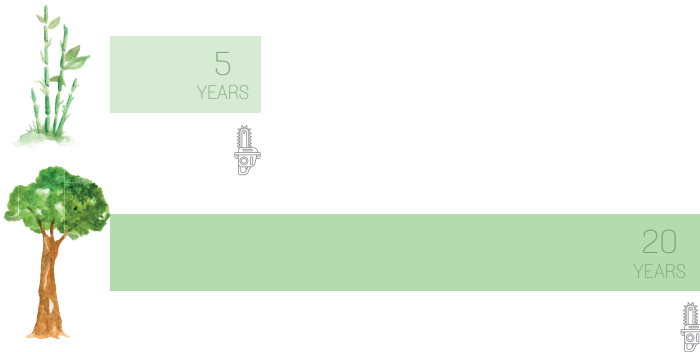

Since trees are extremely important for fighting climate change, they are essential for storing CO2 and need a long time to grow, these facts make bamboo the ideal raw material for keeping our planet alive.

It can grow up to 75 cm in one day, and does not need to be replanted after harvest. In fact, regular harvesting actually improves the health of the plant.

100% tree free and biodegradable.
